

METALUX ARCTIC

200/300G THERMAL UNDERSUIT

Metalux® is a unique undersuit material, insulating and reflecting a diver's heat back to the body. This has been developed into an enviable reputation for being one of the most effective, lightweight, high performing insulative materials available. Designed to reduce air movement and reflect thermal radiation.

Metalux® retains its impressive insulating qualities when wet or compressed and the quilted construction retains thermal integrity throughout the life of the garment. The material is fleece-lined for comfort, bacteria /fungus resistant and will withstand multiple washes. Suitable for use in conjunction with all our neoprene and membrane drysuits.

This model is suited to more extreme diving conditions and/or for under drysuits without thermal properties.

Flexible panels in the lower back, shoulders, cuffs and feet give exceptional freedom of movement, without sacrificing warmth.

- Lightweight & durable
- Fleece-lined
- Quick-drying design
- Bacteria and fungus resistant
- Zipped chest pocket
- Pockets on hips
- Elastic foot stirrups
- Two way YKK® zip
- Drawstring mesh bag supplied
