

ROCK SWIM SAFETY BOOTS

Our Safety Rock Swim Boots can be used with most models of drysuit, with attached latex/neoprene socks or wetsuit socks.

These boots are designed to expel water post-dive, to increase comfort and retain foot protection out of water.

Equally, they are also suitable for traveling to a dive site, as they can be worn with or without additional socks and fins can be directly fitted over the boots.

Providing far greater protection than our Standard Rock Swim Boots, essential when more substantial PPE is required.

Allowing maximum comfort and control, these boots will allow the wearer to perform their tasks on dry land, in and under water.

This safety footwear complies with the EC directive for Personal Protective Equipment (Directive 89/686/EEC) and meets the requirements of the European standard EN ISO 20345:2004.

This is certified by Intertek UK Limited (Centre Court, Meridian Business Park, Leicester, LE19 1WD, Notified Body No 0362).

In addition, this footwear is manufactured using both synthetic and natural materials, which conform to the relevant sections of EN ISO 20345 (for performance and quality).
