DOUBLE RIGID BOARDING LADDERS

Enables boarding teams to deploy quicker. The Rigid Boarding Ladder has retained all original features but is now also available in a double-width version. The double is as flexible in its applications as the single, with the added benefit of increasing team insertion time. Rigid Boarding Ladders float (both in fresh and salt water) if dropped overboard.

RBL FLEXIBLE EXTENSIONS

The Flexible Extension provides additional length to the Rigid Boarding Ladders. It can also help to prevent damage to the RHIB and the RBL if they make contact in rough sea states. The extensions are supplied with the recommended number of Stand Off Discs and two carabiners for attaching to the RBL.

Breakaway connectors can also be used to prevent damage to the RBL if a component of the RHIB inadvertently catches the extension ladder. The Flexible Extension comes in 1m, 2m and 4m lengths. They are easy to attach and detach according to mission requirements.
